Professional Summary

Associate Product Manager with a Computer Engineering background, currently owning **ShiftEaze**, a shift workforce management platform live at Mundra Port (APSEZ) for 6,000+ operators. Combine hands-on engineering (Python, Node.js, AWS, ML) with requirements, system architecture, and client management to take features from discussion to production.

Work Experience

Veracity Supply Chain Limited **June 2026 – Present**
Associate Product Manager *Gujarat, India*

- Own the end-to-end product for **ShiftEaze**, a workforce management platform live at **Mundra Port (APSEZ)**, supporting **6,000+ operators across 12+ terminals**; drive the roadmap, feature prioritization, and release timelines
- Design the architecture and user flows for rostering, attendance, leave, overtime, and AI calling modules; authored **20+ Business Requirement Documents (BRDs)** that turn client operations into build-ready specifications
- Defined the automated **rostering engine** (shift-cycle generation, rotation logic, conflict detection across a Terminal/Department/Batch hierarchy), replacing manual spreadsheet-based planning
- Led the **ML attendance prediction** pipeline (**LightGBM**, rule-based overrides, WoE logistic scorecard; nightly ingestion, weekly retraining); set a 0.45 threshold to minimize false negatives given the cost of idle port machinery
- Drove the **AI calling module**, which places event-triggered calls to operators for shift confirmation, punch-in/out reminders, absence-priority alerts, and overtime requests; specified workforce analytics dashboards
- Run client-facing meetings, set delivery timelines with engineering, and manage the bug and feature backlog across web, app, and AI calling; work hands-on with the codebase to validate data models and debug production issues

Aasma Technology Solutions **October 2024 – May 2026**
Software Engineering Intern – Backend *Remote*

- Solely owned the backend of production web applications, making architecture and infrastructure decisions and working with frontend and product stakeholders to turn requirements into system design
- Built scalable REST APIs in **Node.js** and **Python** using **AWS API Gateway**, **Load Balancers**, and **SQS**-driven event pipelines; owned schema design, migrations, and query optimization across **MySQL** and **MongoDB**
- Containerized services with **Docker**, managed CI/CD, and enforced security and code quality through JWT authentication, input validation, secrets management, and code reviews

Skills

Product & Management: Product Ownership, Roadmapping, BRD Writing, Requirement Gathering, Workflow Design, Feature Prioritization, Backlog Management, Timeline Planning, Client & Stakeholder Management
Languages: Python, JavaScript, SQL, Java, C, C++
Backend & Web: Node.js, Express.js, Django, FastAPI, React, REST APIs, Microservices
Data & AI/ML: LightGBM, Logistic Regression Scorecards, Attendance Prediction, RAG Pipelines, Workforce Analytics
Databases & Cloud: MongoDB, MySQL, SQLite, AWS (SQS, API Gateway, Load Balancer), Docker, Git, CI/CD
Other: System Design, Data Structures & Algorithms, JWT Authentication

Projects

BiteLearn | *Django, React, MongoDB, REST APIs* | GitHub

- Architected a Django REST backend with JWT authentication serving a decoupled React frontend, managing user progress, content metadata, and analytics across **MongoDB** collections
- Integrated third-party ML model APIs for content processing, using async job queuing for video/PDF analysis without blocking the main request thread

MegaMart | *Django, PayPal API, SQLite, REST* | GitHub

- Built a Django e-commerce backend with **PayPal SDK** payments, order lifecycle tracking, and role-based access control; session auth and CSRF protection with automated status tracking cut order management overhead by **∼35%**

StealthCheck Data Detector | *Python* | GitHub

- Built a steganography detection tool using LSB analysis and statistical algorithms, achieving **90%+ detection accuracy** on test datasets

Education

LJ Institute of Engineering and Technology **September 2022 – May 2026**
Bachelor of Computer Engineering *CPI: 8.8/10*

Technical Achievements

3-Star on CodeChef (vidhan59) with a 1744 rating and Global Rank 190
LeetCode rating of 1614; 300+ problems solved across Codeforces (dungeon59), CodeChef, and LeetCode
